Phoenix Baccarat Strategy Visualization System

The Phoenix Baccarat Strategy Visualization System

incorporates the six (6) scoring methods commonly used by most S. E. Asian players.

The systems' enhancement now includes a larger 22" (16:9) high resolution LCD monitor with improved angle viewing and clearer graphics making for easier viewing for the players and staff alike.

The system can support one or more printers on each gaming table so players are able to access a print of an updated scorecard for the table shoe results at that time. For VIP applications previous shoe results can also be made readily available.

The system provides several details in excess of the traditional scoring methods. This value added service permits players to obtain the latest and most accurate table shoe information quickly and efficiently.
