Phoenix Casino Operating Program (COP)

The Casino Operating Program (COP) is the latest casino reporting system on the market. Unlike its competitors, this system is easy to use and at a fraction of the price. COP has been designed by casino executives with an intimate knowledge of the casino business and the requirements of the management and owners within this dynamic industry.

COP software is an Internet based user-friendly system whereby the user 'clicks' on the function to perform any desired command. Whether you are operating a small or large size casino, COP will meet your entire casino operating and reporting requirements. The software is continually upgraded with new and advanced features meaning that your casino software continually grows as your casino expands through the efficiencies of utilizing the system.

Using COP ensures reliability and streamlined simplicity making COP the most trouble free casino reporting system available. The system can be configured in any way that meets your casino management's and owner requirements. Included in the system price is a fourteen-day installation, training and solutions period, which is most unique, allowing time for each department to implement any system design enhancements or reporting features needed.
