Phoenix Dice Recognition System

The Phoenix Dice Recognition System offers casino operators a secure, automatic and efficient method of correctly reading a dice result for games such as Sic Bo, Yu Ha Hai and Mini Dice. After the dice result has been determined using a covered electronic dice shaker, the result is "read" by a camera concealed within the dice shaker, on revealing the result to players the result is automatically transmitted to the table display and also the results display. A manual confirmation of the result can also be incorporated should the operator require an additional level of security, however the error rate inherent in the system's operation is so low that this is normally not justified. Results are communicated quickly and accurately, game play is increased due the time saved, errors are reduced further enhancing the play rate and security is increased with less opportunity for dealer or player manipulation of the results.

Improve play rate, reduce cheating and lift results...!

The game of Sic Bo has always been a main stream table game in S.E. Asian casinos and with its high percentage hold, Sic Bo needs to be well paced to produce high turnover and the expectant gross win. However many Sic Bo games are inconveniently slowed down when the Dealer enters the wrong winning number combination and the game stops whilst the error is resolved by the Pit Manager. Calculate the additional turnover and resultant gross win when there are no such errors, reduced opportunities for cheating, and the game flows as it should. The Phoenix Dice Recognition System pays for itself over and over again.

FEATURES

- Unique versatile product with exclusive software
- Designed to appear the same as existing quality dice shakers
- High security software reduces operational vulnerability
- Independent operation so it can be retrofitted to most dice shakers
- High quality, high resolution camera reduces error rate
- A signal feed is available for Surveillance Department
- Increased productivity due fewer game stoppages and Dealer errors
- Increased play rate means increase in turnover and win
- Increased security reduces opportunities for dealer manipulation
